

LAB 4 – VIBECODING

Chat History – Whack-a-Mole

Project Information

Project: Whack-a-Mole

Repository: 48_whack-a-mole

Objective: Fix the broken code and implement the README features using Vibe Coding / Copilot.

Chat 1 – Fix Collision Detection

User Prompt:

Fix the collision detection in the Whack-a-Mole game so one click cannot hit two neighboring moles or award two points. Make the hit detection accurate to the mole shape and allow only one successful hit per click.

AI/Copilot Result: The collision logic was changed to use a circular hit area matching the mole, and the click handler stops after the first successful hit.

Testing: Manually tested and confirmed one click awards only one point.

Chat 2 – Game Over Screen

User Prompt:

Add a Game Over screen when the timer reaches zero. Display the final score, stop gameplay and prevent additional scoring.

AI/Copilot Result: A game-over state was added. Gameplay and spawning stop at zero time, the final score is displayed, and scoring clicks are ignored.

Testing: Manually tested and confirmed working.

Chat 3 – Replay and Difficulty

User Prompt:

Add Easy, Medium, Hard and Exit options to the Game Over screen. Reset the complete game state when replaying and make the difficulties change mole spawning and visibility.

AI/Copilot Result: Added the four menu options. Replay resets score, timer, misses and mole states. Easy has slower spawning/longer visibility, Medium is default, and Hard has faster spawning/shorter visibility.

Testing: All options were manually tested after focusing the game window.

Chat 4 – Sound Effects

User Prompt:

Add sound effects for a successful whack, a missed click and the end of the round. Load sounds once and keep the game running if audio initialization fails.

AI/Copilot Result: Added hit, miss and game-over sounds under game/assets/sounds/. Audio failures do not stop the game.

Testing: All three sound effects were manually tested and confirmed working.

Git Commit History

15469c2 – Fix mole collision detection

e03a50e – Add game over screen

82d58c2 – Add replay and difficulty selection

aa578a2 – Add sound effects

Final Integration

The completed project was copied into the personal repository under **Lab4/48_whack-a-mole/** and pushed to the personal repository. No pull request was raised to the SETAPESU26 main repository.
